- any additional filing fees required under 37 C.F.R. 1.16, and
- any patent application processing fees under 37 C.F.R. 1.17, to Deposit Account No.

**18-1171.**

Reconsideration of the outstanding rejection is respectfully requested in light of the following amendment and remarks.

Please amend the above referenced application as follows:

In the claims:

Please amend claim 14 as follows:

14. (Amended) Single-component organopolysiloxane compositions which are stable on storage in the absence of moisture and which crosslink to translucent and adherent elastomers in the presence of moisture, made in a single closed reactor with stirring, by the process, batchwise or continuous, comprising the successive following steps 1 to 3:

- step1: functionalization by reacting a mixture of at least one reactive linear diorganopolysiloxane A comprising a hydroxyl group at each chain end, of formula (I) defined below, at least one hydroxylated organopolysiloxane resin B, as defined below, presenting in its structure at least two different units, at least one polyalkoxysilane C as defined below, optionally, at least one aliphatic C<sub>1</sub> to C<sub>3</sub> alcohol E, and, optionally, at least one nonreactive linear diorganopolysiloxane F as defined below, said functionalization being carried out in the presence of a catalytically effective amount of a functionalization catalyst D, provided that said catalyst is not an organic titanium derivative,

**RN98170**

**Serial No: 09/856,808**

**Amendment**

- step 2: blending or compounding by adding in any order into the reacted mixture obtained in step 1, which is kept stirred, an inorganic filler G comprising an amorphous silica in the form of a solid, an effective amount of a curing catalyst H as defined below, comprising at least one organic titanium derivative, optionally, at least one nonreactive linear diorganopolysiloxane F as defined below, and ,optionally, at least one auxiliary agent I, and

- step 3: subjecting the blended or compounded mixture obtained in step 2, which is kept stirred, to a devolatilization operation carried out under a pressure below atmospheric pressure,

wherein

- the reactive linear diorganopolysiloxane A is of formula (I):

wherein:

R<sup>1</sup> substituents, which are identical or different, represent an aliphatic, cyclic or aromatic, saturated or unsaturated, substituted or unsubstituted, C<sub>1</sub> to C<sub>13</sub> monovalent hydrocarbonaceous group,

n has a value sufficient to confer, on the diorganopolysiloxanes of formula (I), a dynamic viscosity at 25°C from 1 000 to 1 000 000 mPa·s,

**RN98170**

**Serial No: 09/856,808**

**Amendment**

- the hydroxylated organopolysiloxane resin B exhibits in its structure, at least two different units selected from the group consisting of the units of formulae  $(R^1)_3SiO_{1/2}$  (M unit),  $(R^1)_2SiO_{2/2}$  (D unit),  $R^1SiO_{3/2}$  (T unit) and  $SiO_2$  (Q unit), at least one of these units being a T or Q unit, said  $R^1$  groups, which are identical or different, being as defined above in formula (I), said resin containing hydroxyl groups and having a content by weight of hydroxyl group ranging from 0.1 to 10%,  
the polyalkoxysilane C is of formula (II):

wherein:

$R^2$  represents an aliphatic, cyclic or aromatic, saturated or unsaturated, substituted or unsubstituted,  $C_1$  to  $C_{13}$  monovalent hydrocarbonaceous group

$R^3$ , which is identical or different, represents a linear or branched  $C_1$  to  $C_8$  alkyl group,

a is zero or 1,

b is zero or 1;

- the nonreactive linear diorganopolysiloxane F is of formula (III):

wherein:

**RN98170**

**Serial No: 09/856,808**

**Amendment**

$R^1$ , which is identical or different, is as defined above in formula I,  
m has a value sufficient to confer, on the polymers of formula (III), a dynamic viscosity at 25°C from 10 to 200 000 mPa·s;  
- the catalyst H is selected from the group consisting of H1 monomers and H2 polymers, H1 monomers being of formula (IV)

wherein:

$R^4$ , which is identical or different, represents a linear or branched  $C_1$  to  $C_{12}$  alkyl group,

c is zero, 1 or 2,

provided that when the c symbol represents zero,  $R^4$  has from 2 to 12 carbon atoms and, when the c symbol represents 1 or 2,  $R^4$  has from 1 to 4 carbon atoms,

H2 polymers resulting from the partial hydrolysis of monomers of formula (IV) in which the  $R^4$  symbol has the above mentioned meaning with the c symbol represent zero.

Please amend claim 21 as follows:

21. (Amended) Compositions according to claim 14, wherein the catalyst D is a lithium hydroxide of formula LiOH or LiOH·H<sub>2</sub>O.

Please amend claim 24 as follows:

24. (Amended) Compositions according to claim 14, wherein the curing catalyst H is an organic titanium derivative including the H1 monomers of formula (IV) or the H2
